

COLLECTIVE PRODUCT CARD

BAM "dybki" leather work clogs with toe cap

1. Product description and characteristics

Professional work clogs from BAM are made of high quality **natural cowhide**, which ensures optimal durability and fit to the foot. The upper part of the upper has special **ventilation holes**, which guarantee free air circulation inside the shoe. The closed-toe construction has been integrated with **metal toe cap**, which effectively protects the forefoot from mechanical injuries. The footwear is equipped with a removable and adjustable strap that allows it to be worn as traditional flip-flops or with a heel protector. The product is CE certified.

2. Model and size table

Product symbol	Model name	Size	Main material	Protective elements
ADR062	BAM leather clogs	40	Cowhide	Metal toe cap
ADR063	BAM leather clogs	41	Cowhide	Metal toe cap
ADR064	BAM leather clogs	42	Cowhide	Metal toe cap
ADR065	BAM leather clogs	43	Cowhide	Metal toe cap
ADR066	BAM leather clogs	44	Cowhide	Metal toe cap
ADR067	BAM leather clogs	45	Cowhide	Metal toe cap
ADR068	BAM leather clogs	46	Cowhide	Metal toe cap

3. Application and purpose

- Work in the medical, laboratory and pharmaceutical sectors
- Food and processing industry (catering, canteens, production plants)
- Logistics, transport and warehousing industry
- Cleaning work and services requiring certified toe protection

SAFETY INSTRUCTIONS (OHS)

Applies to BAM leather work clogs with metal toe cap (Models: ADR062 – ADR068)

1. Conditions for safe use

- **Using the heel strap:** When working in transport, warehousing, or using stairs or ramps, the removable strap must always be worn over the heel. This prevents the shoe from accidentally slipping off and twisting the ankle.
- **Proper fit:** Shoes should be chosen carefully based on foot size. Shoes that are too large can cause instability, while shoes that are too tight can cause painful chafing.
- **Sole inspection:** The user is obliged to regularly clean the sole from dirt (oils, grease, cleaning fluids) in order to maintain optimal anti-slip properties on smooth surfaces.

2. Absolute prohibitions and restrictions on protection

- **Protection zone:** A metal toe cap only protects the forefoot (toes) from impact and crushing. These clogs do not protect the metatarsus or heel from severe trauma.
- **No puncture protection:** The sole does not have an anti-puncture insert. It is strictly forbidden to use the footwear in areas where there are sharp objects on the floor (e.g., nails, broken glass, sharp metal chips).
- **Chemical and biological threats:** Natural leather has limited resistance to concentrated acids, alkalis, and strong solvents. Contact with aggressive chemicals can permanently damage footwear, leaving the wearer's skin unprotected.
- **Working in a wet environment:** Due to the presence of ventilation holes, clogs are not waterproof. They should not be used in areas where there is a risk of foot contact with standing water or hazardous liquids.

3. Maintenance, cleaning and storage

- **Cleaning:** Remove dirt from cowhide leather with a damp cloth or soft-bristled brush. Do not machine wash or soak the inside of the footwear.
- **Maintenance:** Regularly use dedicated natural leather care products (shoe polishes, creams) to maintain its elasticity and prevent cracking.
- **Drying:** Dry wet footwear at room temperature, away from direct heat sources (radiators, stoves, strong sun), which can cause the leather to harden and shrink.
- **Storage:** Store in dry, airy rooms, in a position that prevents permanent deformation of the upper.
